IVRAR Capstone: LinkedIn & GitHub Showcase Guide

Immersive Virtual Reality & Augmented Reality (IVRAR - 702TG0C003) · AY 2026–27 Odd Semester · Dr. Sunny Nanade, MPSTME Mumbai

1. What you submit (and nothing else)

#	Deliverable	Where	Marks it feeds
1	Your group's **Technical Dossier** (the pre-filled Word file), completed and exported to **PDF**	MS Teams: **every student turns it in individually**. **Also commit the filled `.docx` and the `.pdf`** to `Group_XX/docs/` in the monorepo	SBL Studio Project (10) and DBL Usability Case Study (5)
2	Your group folder in the course **monorepo** + a **GitHub Release** with your build	https://github.com/sunny-nanade/NMIMS-MPSTME-IVRAR-2026	SBL Studio Project (10)
3	A **3-to-4-minute LinkedIn video**	LinkedIn post URL in dossier Section 5	Studio Showcase & Viva Voce (5)

Due: Monday, 26-Oct-2026, 23:59 IST. Studio Showcase, Expo & Viva Voce: Saturday, 31-Oct-2026. No slide deck is needed for IVRAR.

2. Filling in the dossier

- Open it in **Microsoft Word** (desktop recommended). Every answer goes into a **"Select ▾" drop-down** or a **"type here" field**. Click it and choose or type. Do not delete these fields or type over the table borders, and **do not edit the file in Google Docs or LibreOffice**: they can break the drop-downs, and the drop-downs are how your answers are read.
- Pictures (plots, code) go in the boxed areas. Paste code as text, not as a screenshot.
- **Section 6 (Individual Learning Record)** is not marked. Each member fills their own row honestly.
- When finished: **File → Save**, then **File → Export → PDF**. Commit **both** files to `Group_XX/docs/` with the exact names `IVRAR_Group_XX_Technical_Dossier.docx` and `.pdf` (keep the original file name; no "final_v2" copies).

3. The individual turn-in rule (read this twice)

This is a team project, but marks are entered **per student** in the NMIMS examination portal. **Every one of you must open the MS Teams assignment, attach your group's final PDF dossier, and click "Turn in" yourself.** If you do not turn in, you will have no capstone marks recorded, even if your teammates did.

4. GitHub: working in the course monorepo

- All 18 groups work in one repository: **https://github.com/sunny-nanade/NMIMS-MPSTME-IVRAR-2026**. Your work lives only in your own folder, `Group_XX_Names/`.
- **Each member commits their own work, from their own GitHub account.** Section 3 of the dossier lists commits per member, and they are checked against GitHub history. One person pushing everything for the team will show up there.
- Work on a branch named for your group (e.g. `group-07/evidence-tagging`) and open a pull request into `main`.
- **Git LFS:** the root `.gitattributes` already tracks models (`*.fbx *.obj *.blend *.glb *.gltf`), textures (`*.png *.jpg *.psd *.exr *.hdr`), audio (`*.wav *.mp3 *.ogg`), video (`*.mp4`) and `*.unitypackage`. Run `git lfs install` once on your machine before committing assets. Check with `git lfs ls-files`.
- **Never commit builds.** Your `.apk` (Quest/Android) or `.exe` (PCVR, zipped) goes in a **GitHub Release** tagged `group-XX-v1.0`.
- Commit the **filled dossier** (`.docx` + `.pdf`) to `Group_XX/docs/`. It is small, so normal Git is fine; it is not an LFS file type.
- Put your **real** participant data in `Group_XX/telemetry/` as CSV with anonymous IDs (P01, P02…). No names, phone numbers or emails in any file.

5. Data integrity: real people, real numbers

Your folder may contain starter files such as `sample_experiment_data.csv`, `*_benchmark.csv` and `generate_paper_figures.py`. **These generate simulated numbers.** They are there to show you the CSV format and how to plot. They are **not** results.

- Everything in dossier Section 4, your video and any paper must come from **at least 10 real people** who used **your** build.

- Every participant must be an adult volunteer who signs a short consent form (what they will do, that they can stop any time, that data is anonymous). Keep the signed forms.
- Delete or clearly rename any simulated file (e.g. `SIMULATED_sample_data.csv`) before you submit. Simulated numbers presented as human data is research misconduct and scores zero.
- **Group 15 (acrophobia):** test with non-clinical volunteers only, not people with a diagnosed phobia. This is a usability study, not therapy. Anyone can stop at any time.

6. Human-in-the-loop evaluation in brief

- **SUS:** the standard 10 statements, 1–5 agreement. Score = 2.5 × [Σ(odd − 1) + Σ(5 − even)]. 68 is the commonly used average benchmark.
- **NASA-TLX:** six 0–100 ratings (mental, physical, temporal, performance, effort, frustration). Report the raw mean.
- **Or a latency / frame-rate profile** if your question is about system performance (e.g. Group 10, Group 18).
- Report N, mean, SD and median, and show one box-plot. Two conditions? Say which is which and how you counter-balanced the order.

7. The LinkedIn video (3:00–4:00)

Time	Part	On screen
0:00–0:20	The problem and your Aalborg question, with one verified number	Face
0:20–1:30	**The running XR build**: headset view or screen capture, not slides	Live build + face in a corner
1:30–2:15	Your state machine and one equation, explained simply	Diagram / code
2:15–3:00	**Your user-testing results**: N, SUS, your key metric, one plot	Plot
3:00–3:45	Personal reflection from each member (what I built, what I learned, what AI got wrong)	Faces

- **Every member appears and speaks.** A Teams, Zoom, Meet or Loom recording with webcams on is perfectly fine. No special software is needed.
- Upload the video **natively** on LinkedIn (not a YouTube link). One post per group, from one member's account, with all teammates tagged; teammates repost.
- Tag MPSTME and Dr. Sunny Nanade; link your group folder in the monorepo.
- **Privacy:** show no participant faces or names without their written permission, no SAP IDs, and no consent forms.

Post template (fill in the brackets):

```
[One-line hook with one verified number]
Our IVRAR capstone team at SVKM's NMIMS MPSTME asked: "[Aalborg title]"
We built [what] in Unity [XR toolkit], with [key C# system], and tested it with [N] people:
SUS [x], [key metric + result].
What we learned: [one honest line, including one thing AI got wrong]
Code: [link to your monorepo folder]
Team: @… @… @…   Guided by @Sunny Nanade
#VirtualReality #AugmentedReality #Unity3D #XR #HumanComputerInteraction #MPSTME #NMIMS
```

8. AI use and the audit log

AI tools are allowed. **Unverified AI output is not.** This course has already caught invented reports ("Verizon 2024 XR"), fictional companies ("NEXORA Corp") and real papers given the wrong journal. Dossier Section 1.1 asks you to verify each factual claim (with its source type and a Keep / Correct / Delete decision); Section 5.1 logs three cases where AI was wrong, how you caught each one, and what kind of error it was. Check against the standard itself, official documentation (Unity, Meta, Khronos/OpenXR), or the original paper with its DOI.

9. Peer review (Section 5.2)

Each group watches and scores two other groups' LinkedIn videos, 0–2 on each of Problem, Build, Data, Honesty, Clarity (total /10), with the best moment and one viva question.

Your group	You review
Group 01	Group 02 and Group 10
Group 02	Group 03 and Group 11
Group 03	Group 04 and Group 12

Group 04	Group 05 and Group 13
Group 05	Group 06 and Group 14
Group 06	Group 07 and Group 15
Group 07	Group 08 and Group 16
Group 08	Group 09 and Group 17
Group 09	Group 10 and Group 18
Group 10	Group 11 and Group 01
Group 11	Group 12 and Group 02
Group 12	Group 13 and Group 03
Group 13	Group 14 and Group 04
Group 14	Group 15 and Group 05
Group 15	Group 16 and Group 06
Group 16	Group 17 and Group 07
Group 17	Group 18 and Group 08
Group 18	Group 01 and Group 09

10. Track A: turning your dossier into a short paper (optional, encouraged)

Your completed dossier maps directly onto a 4-page, 2-column IEEE conference paper (see the table at the end of Section 5 in your dossier). Use the official **IEEE conference template** (IEEEtran, US Letter or A4 as the venue requires). Keep it honest: real N, real limitations, verified references with DOIs. Your title sheet lists one national and one international venue for your group. Check each venue's current call for papers, deadline and student-track rules before you write, and speak to Dr. Nanade about institutional support for registration.

11. Studio Showcase, Expo & Viva Voce (Saturday, 31-Oct-2026)

Bring your running build to the Expo. Each member will be asked about **their own role and code** and about the project as a whole. If you cannot explain something you submitted, it counts against you, however good it looks.
